

在Web 端使用3D Touch

- HuiminLiu

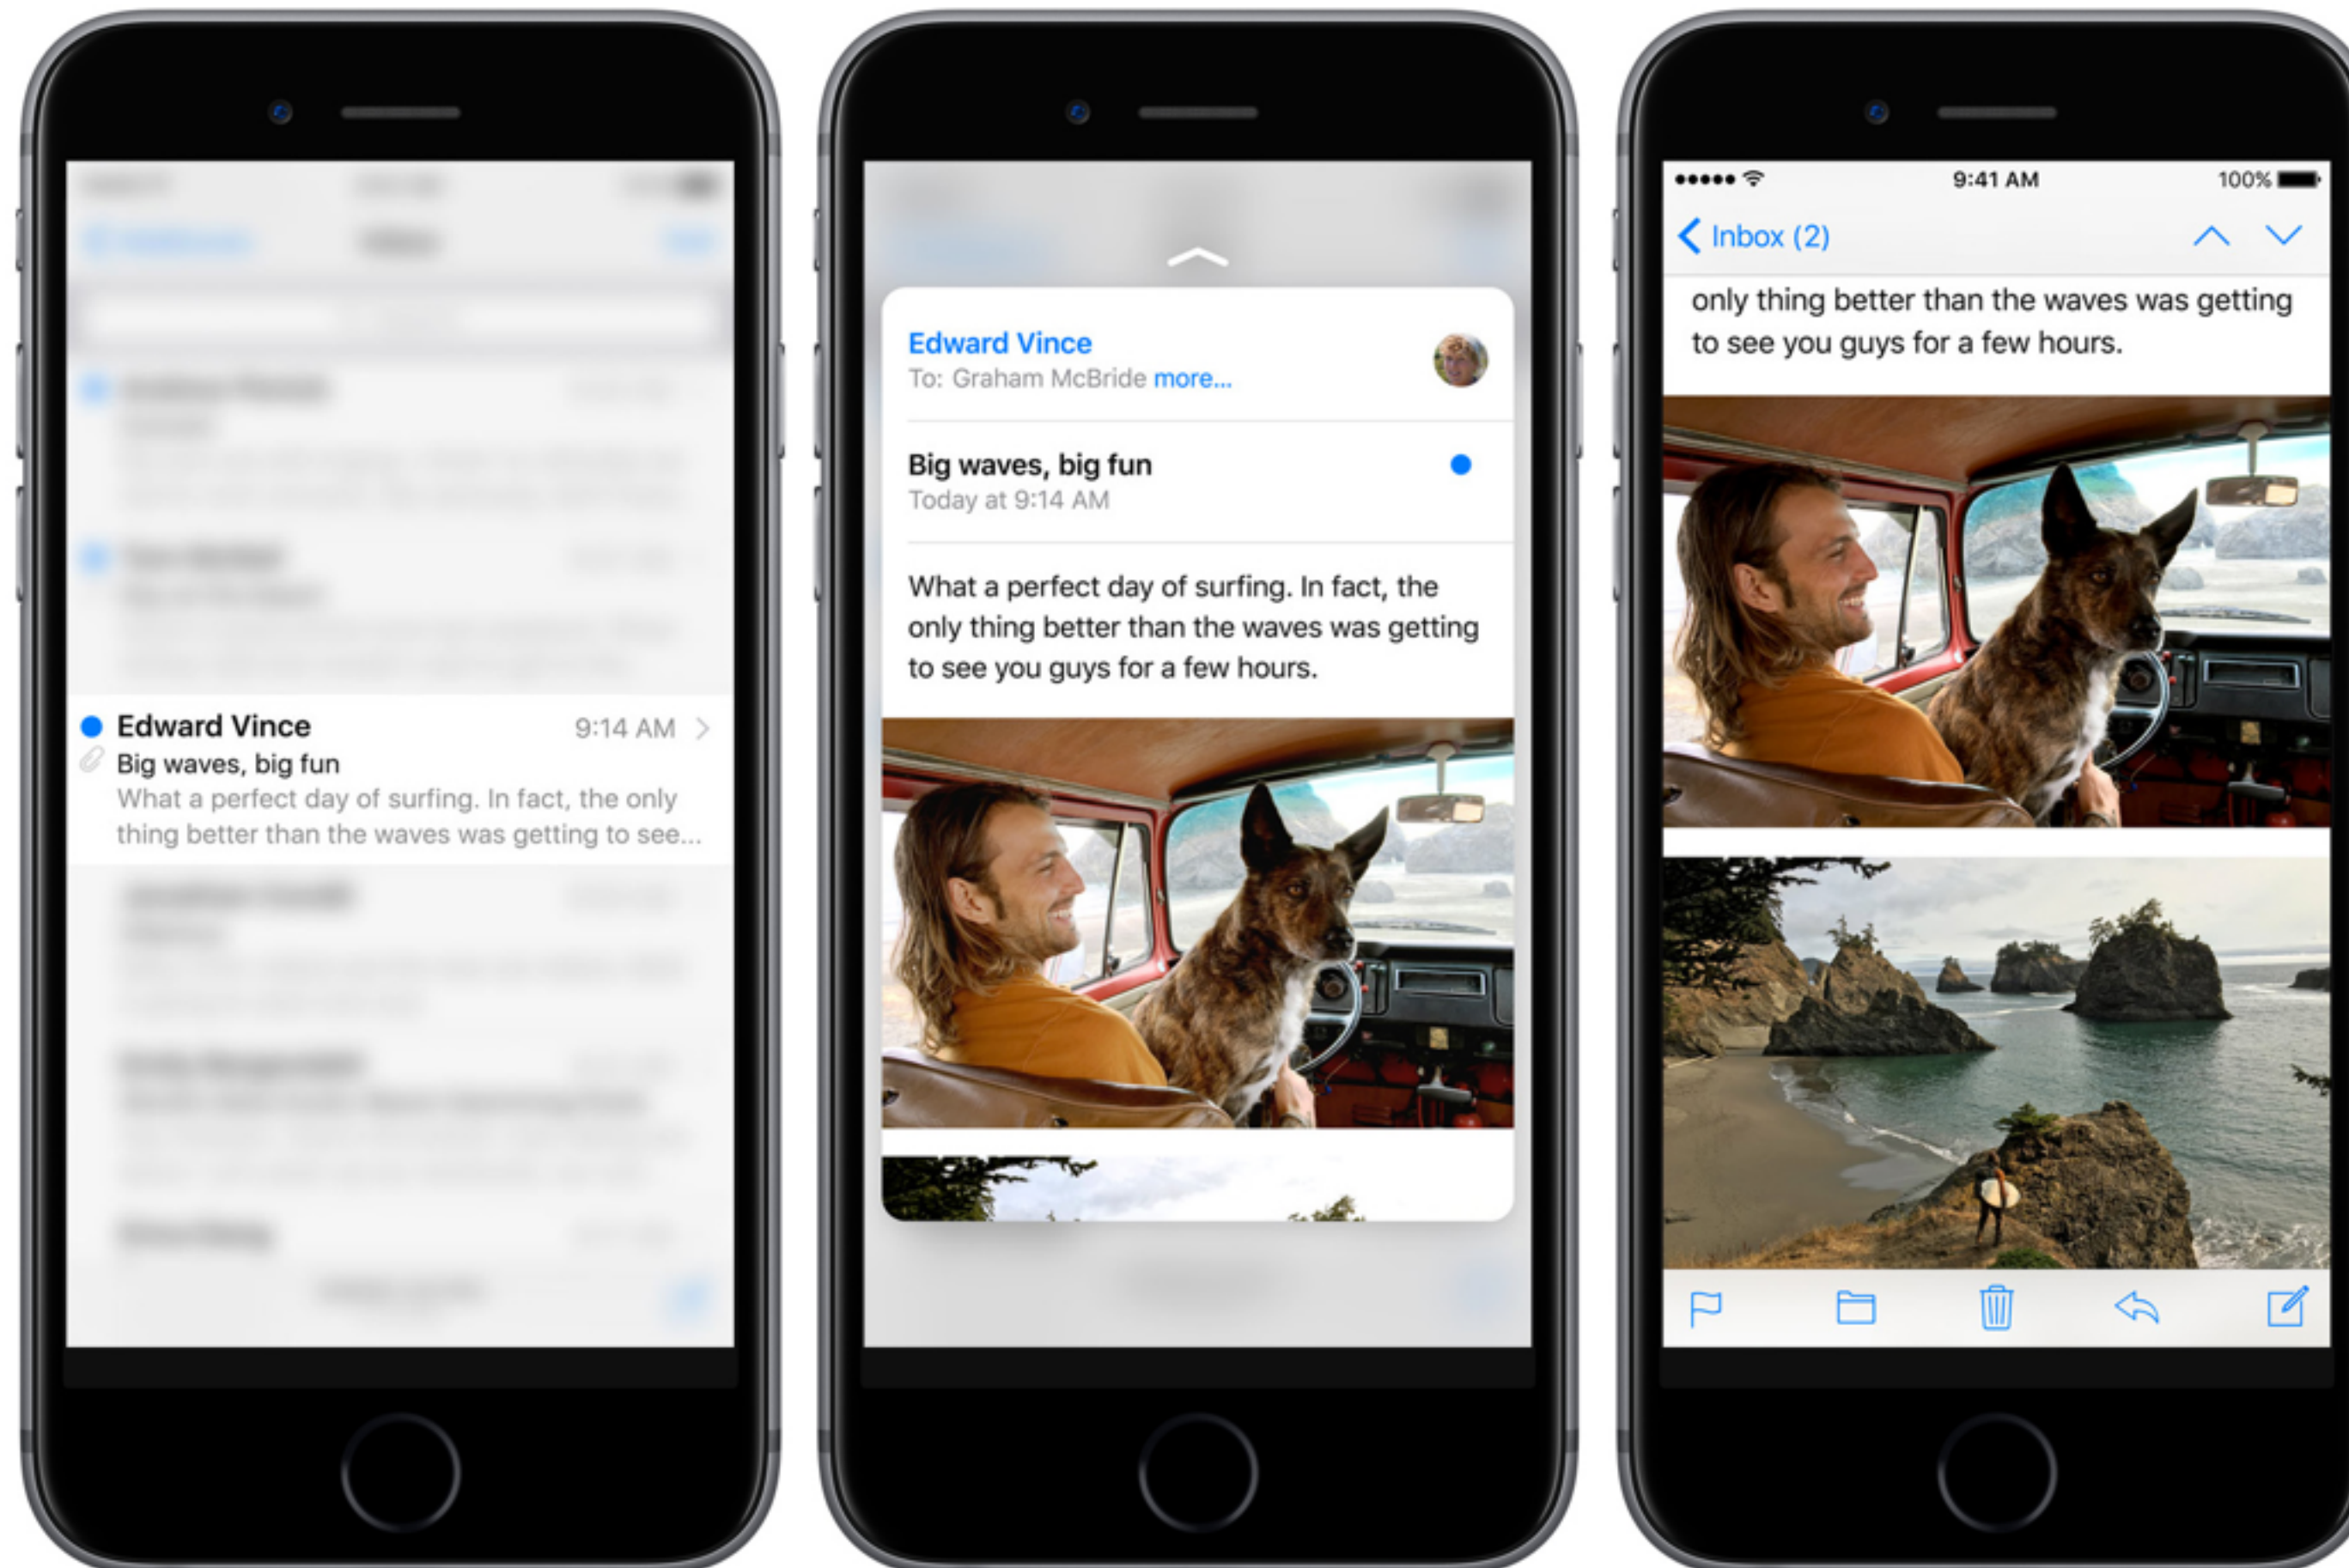

3D Touch & Force Touch

- Force Touch
2014年9月公布的一项压力敏感屏幕技术，最早用于Apple Watch上，可识别轻点、轻按两种操作
- 3D Touch
基于Force Touch，于2015年9月在iPhone6s 上得到改进并更名为3D Touch，提供了更高灵敏度的触控力度识别、及更强的触感反馈，支持轻点、轻按及重按三个维度

How it works?

Peek and Pop

3D Touch in Safari 10

3D Touch Events

For 3D Touch on iOS, the `touchforcechange` event is called only when the force changes. The event is the 3D Touch equivalent of `webkitmouseforcechanged` for WebKit on OS X. The values of the `force` property on `touch` objects range from `0.0` to `1.0`.

JavaScript API

- Touch.force in:
 - Force Touch events (for Mac)
 - touchforcechange event (for iPhone)

Compatibility

- Need Safari10 + Hardware Support
- So... 微信目前并不支持 :(

Demo

How to use (currently)?

```
1  //3D Touch 事例代码
2  el.addEventListener('touchstart', function(ev) {
3      var forceValue = ev.touches[0].force // 获取第一次force 的值
4
5      setInterval(function() {
6          forceValue = ev.touches[0].force // 获取后续force 更新后的值
7      }, 16)
8  })
```

How to detect?

- 检测Touch.force 的值是否有发生过变化

Pressure.js

- 一个封装了Force Touch 与 3D Touch 的JavaScript 库, 并且可用长按操作来兼容处理不被支持的浏览器或设备
